Optimal Performance Guidelines

- Always use premium applicators. Synthetic brushes and high quality lint free rollers are recommended. May be sprayed.
- All surfaces must be clean, dry and free of grease, wax, oils and other contaminants.
- While applying paint always maintain a wet edge and a liberal uniform film thickness.
- Thinning is not recommended.
- Before painting be sure that enough paint is purchased and boxed together to ensure a uniform colour.
- Follow label/lid directions for application and primer requirements.
