ORIGIN	USA
PRODUCTION PROCEDURES	Antibody was affinity purified using an epitope specific to UVRAG immobilized on solid support. The epitope recognized by IHC-00590-T maps to a region between residue 649 and 699 of human UV radiation resistance associated gene using the numbering given in entry NP_003360.2 (GeneID 7405). Immunoglobulin concentration was determined by extinction coefficient: absorbance at 280 nm of 1.4 equals 1.0 mg of IgG.
APPLICATIONS	Centrifuge tube to remove product from lid. Optimal working dilutions should be determined experimentally by the investigator. Prepare working dilution immediately before use. Immunohistochemistry 1:100 – 1:500
APPLICATION NOTES	Epitope exposure is recommended. Epitope exposure with citrate buffer or tris-EDTA pH9.0 buffer will enhance staining. Likely to work with frozen sections. In some cases, the antibody may be diluted further than indicated.
IHC HUMAN CONTROLS	Breast Carcinoma, Colon Carcinoma, Ovarian Carcinoma, Prostate Carcinoma, Stomach Adenocarcinoma
IHC MOUSE CONTROLS	Renal Cell Carcinoma, Teratoma
